CLERMONT DIGITAL • QUICK GUIDE

Moving Your Passwords Across

Importing your 1Password export, safely.

We've exported your 1Password vault into a single file called a **1PUX** and sent it to you in a **password-protected file**, with the password sent separately. This guide walks you through importing it into your new password manager, checking your logins and login codes work, and then getting rid of the file for good. It won't take long.

⚠ Once You Unzip It, Handle It Carefully

We send this to you inside a password-protected file, so it's safe in transit. Once you unzip it, though, the 1PUX inside holds every password and login code from your vault in **plain text**. So import it soon, keep it only on your own device, and delete it the moment you're done. Don't copy it to a shared drive or leave it sitting in your Downloads folder.

What Comes Across

COMES ACROSS

- The logins and passwords we've stored in our vault for your company
- Rotating login codes (MFA)
- Secure notes
- Other saved items

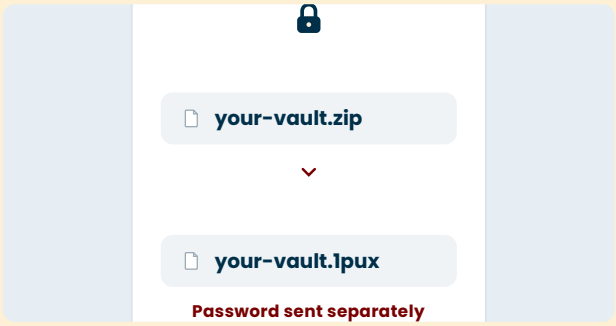

YOU'LL REDO

- Passkeys don't move between apps. At each site that used one, set it up again. Your passwords still work in the meantime.

The Plan

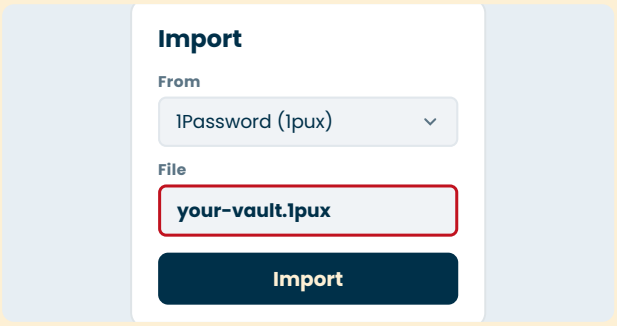

1. **Unlock**
   Open the protected file with the password.
2. **Import**
   Bring the file into your new app.
3. **Check, Then Delete**
   Confirm it worked, then remove the files.

The steps are on the next page.

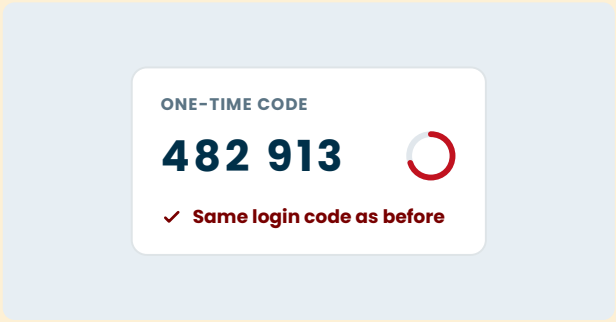

Unlock The File

1. Open the protected file with your password.
2. Extract the 1PUX file from inside it.
3. Keep it on your own device, not a shared folder.

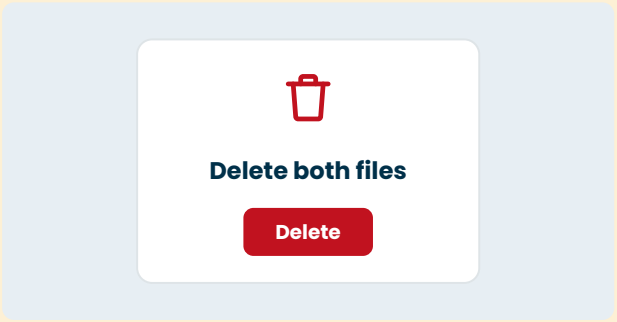

Import It

1. In your new app, open Settings, then Import.
2. Choose 1Password (or 1PUX) from the list.
3. Select the file you extracted and import.

Check It Worked

1. Open a few accounts and check the logins.
2. Open one with a login code, check it shows.
3. Sign in to one to be sure.

Clean Up

1. Delete the 1PUX and the file it came in.
2. Empty the Trash or Recycle Bin.
3. Clear it from cloud sync or backups too.

If Something's Missing

- **A login looks blank?** Open the item, extra details often sit in the notes.
- **File won't import?** Confirm your app accepts 1PUX. Some only take CSV.
- **No login code showing?** Check you imported the 1PUX, not a CSV.
- **Not sure?** Send us a message and we'll walk you through it.
